# Support Your ESG Journey With Centralised Environmental Reporting

Environmental reporting is most often driven by local, state and federal regulations. Yet more organisations are looking to move beyond compliance to demonstrate sustainability that meets stakeholder demands, supports growth and attracts new talent.

However, the data needed is often reported on paper forms and stored in various places making it difficult to provide visibility for reporting.

As companies look to build their ESG strategy, regardless of which framework you choose, you can't report on it if you don't track it. Environmental sustainability and ESG reporting starts by keeping track of your KPIs in one central place, so that you can demonstrate improvements to your stakeholders.

EXPECTED OUTCOMES

Track for improvement – Create and track an inventory of your ESG goals and environmental permits to stay on track and easily identify areas for improvement.

Provide central visibility – Centrally track key sustainability objectives and KPIs to achieve full transparency toward your environmental compliance performance.

Demonstrate compliance – Ensure consistent management of environmental permits and associated actions, tasks and workflows to support regulatory compliance.

Save time – Reduce the administrative burden of environmental reporting with digital compliance reminders and task assignments.

Ensure consistency – Ensure all areas of the business are following the same best practice.

Plan for the future – Collect all relevant data now so that you can be prepared for future needs, particularly as frameworks and requirements change.

WHAT'S INCLUDED?

✓ **WATER & AIR EMISSION REPORTING**
Capture your air and water emissions samples and record in one place. Keep track of your key measures and track for improvements.

✓ **WASTE MANAGEMENT**
Capture and report non-hazardous waste inventories and disposal methods for your sustainability reporting.

✓ **ONSITE SUBSTANCE TRACKING**
Track the hazardous and non-hazardous substances onsite and create YTD reports.

✓ **SUSTAINABILITY GHG AND CO2 EMISSIONS REPORTING**
Create and maintain a library of core emission and sustainability factors, like energy and fuel. Record your emissions in one system and create emission reports to track and monitor them.

✓ **ESG RISK REGISTER & KPI TRACKING**
Create an inventory and register of your climate-related risks or SDG goals.

✓ **ENVIRONMENTAL AUDITS & CHECKLISTS**
Digitise your audit and checklist paperwork. Regularly examine your environmental management processes.

✓ **ISO 14001 ASPECTS AND IMPACTS TRACKING**
Track all data needed to support your ISO 14001 certification.

⊚ **Metric**

ESG Benchmarking

We work closely with our partner, Metric, who provides an ESG analytical platform for measuring, benchmarking and improving ESG performance for private companies and investors.

HOW DOES IT WORK?

Report all your data consistently – Configure forms to reflect your environmental reporting requirements, terminology and processes to collect consistent data across your company. Allow consultants and third parties to submit reports.

Define approvals process – Make sure all your environmental activities are fit for purpose and signed off by a manager.

Built-in action management – Delegate environmental actions and tasks to relevant individuals. Track them to completion or escalate overdue actions to line managers.

Automatic reminders – Stay-up-to date with reassessment requirements.

Track your data for improvement – Gain a clear view of your environmental metrics and trends using dashboards, supporting a proactive approach to environmental performance.
